1 Project Overview

This Concept of Operations (ConOps) document provides a comprehensive yet concise guide that helps project stakeholders understand the purpose, functionality, and operation of a new scheduling software application, **Life Beyond the Books Scheduler (LBBS)**, that will help Life Beyond the Books stakeholders to more effectively manage and control the various schools, classes, and volunteers involved with the organizations activities. Life Beyond the Books (LBB) is a non-profit organization providing experiential life skills learning for middle school students. Life Beyond the Books partners community professionals with 8th grade students to bring essential life skills "to life" in the classroom. This experiential learning is extended to the broader Tucson community through students sharing what they have learned in the classroom with their family unit. The program is currently available to middle schools within the Amphitheater and Flowing Wells School Districts, but is planning to expand into other school districts in the near future.

The LBBS application will provide a platform that allows schools, volunteers / professionals, and the program administrators to register and schedule the life skills classes and activities that the program provides in a given academic school year (*NOTE: the academic school year runs from July 1st - June 30th of any given school year*). It also provides the LBB program administrators a platform to manage various aspects of running the program. This document serves as a valuable reference throughout the software development and implementation process, and defines the software requirements for the application.

The mission of LBB is: *To prepare students for life through teaching the life skills needed to run a home and prepare for a career.*

The vision of LBB: *All students are self-sufficient and ready for life.*

Working professionals in a variety of fields volunteer their time and are brought into the classroom to conduct a variety of "life skills classes" with students to help prepare them for the future basic life skills they will need in areas such as:

- Basic Budgeting

- Civic/Jury Duty
- Cooking
- Communication
- Digital Citizenry
- First Aid
- Fitness
- Hand tool usage
- Safety and crime prevention
- Pet care
- and many more

Some of the community partners that have helped make Life Beyond the Books a reality include:

2 Objectives

The primary objectives for the ***Life Beyond the Books Scheduler (LBBS)*** application include:

- Allowing school administrators to register and sign up for the dates the Life Beyond the Books classes will be held at their schools.

- Allowing professionals/volunteers to create accounts and sign-up for days that they want to teach a class across schools. It also allows them to review their schedules throughout the academic year and make changes if required.
- Providing LBB program administrators with an accurate database of class events by school, volunteer, and classes scheduled for a given school year.
- Providing LBB program administrators with a way to manage and track the finances, by school event, and operational cost of the program for a given academic year.
- Generate reminders to professionals prior to each event.
- Generate surveys for students and volunteers to complete.
- Generate receipts and thank you notes to program donors.
- Provide a means (dashboard) for LBB program administrators to track program metrics for the program.

3 Stakeholders

The key stakeholders for the Life Beyond the Books Scheduler application include:

1. Life Beyond the Book program administrators
2. Middle schools in the school districts that the program supports
3. Volunteers / professionals that will conduct classes for the the students
4. Life Beyond the Books IT support

Note that other stakeholders may be identified as the product development activities proceed in the future.

4 System Overview

The LBB Scheduler is intended to be a software application program designed to streamline and manage the process of supporting the Life Beyond the Books program. Overall, the scheduling application software system aims to simplify registering schools who want to participate in the program, registering professionals that volunteer their time to conduct classes/workshops, reduce administrative overhead, and improve the overall efficiency and running the LBB program over any given school year.

LBBS should be accessible to users on several platforms and operating systems including computers, tablets and mobile devices, and it should also interface directly with the Life Beyond the Books website which can be found at Life Beyond the Books (<https://lifebeyondthebooksaz.org>) .

5 Capabilities

5.1 User Roles

The system shall distinguish between different user roles, such as school administrators, professionals/volunteers, LBB program administrator(s), with varying levels of access and permissions. The table below defines the roles of different users and their responsibilities within the software system.

Type of User	Roles and Responsibilities
Schools Administrators	Representatives from the schools that participate in the LBB program. The school administrator is able to view the available dates for the academic school year and register for a given LBB event at their school, make changes to requested LBB dates at the school, and provide any logistical information (total instruction time, etc) the LBB program administrator may need to ensure a smooth event at the school.
LBB Program Administrator	Responsible for the overall scheduling and planning of the LBB events for any given academic school year. The LBB program administrator has access to view, update, delete any information stored within the LBBS application database(s).
Professional / Volunteers	Professionals and volunteers that offer life skill classes in the LBB program. The professional/volunteer is able to view available dates for the academic school year at different schools, register for a given LBB event, make changes to events they have registered for, and provide any logistical information the LBB program administrator may need to ensure a smooth event at the school.
LBB IT Support Staff	Maintain the LBBS software product and make required enhancements or improvements to the tool as the program evolves from year to year. Also create and authorize new accounts for new schools, program administrators, volunteers and delete accounts for those that are no longer involved in the LBB program.

5.2 School Information

The system will provide a user-friendly (UI/UX) interface for schools to enroll in the Life Beyond the Books program for a given academic school year. This includes selecting optimal dates for a LBB event at the school, number of students, indicate whether any students have active photo restrictions in place, and other information helpful in scheduling.

5.3 Volunteer Information

The system will provide a user-friendly (UI/UX) interface for volunteers to enroll in the Life Beyond the Books program events for a given academic school year. Volunteers are also able to view their schedules and make changes to their schedules throughout the academic year. Any changes made will be sent to the LBB program administrator.

5.4 School Data Management

The system collects and stores school information securely, making it easier for LBB program administrators to access any given schools information easily and accurately.

5.5 Professional Volunteer Data Management

The system collects and stores a professional volunteer's information securely, making it easier for LBB administrators to access any given volunteer's information easily and accurately. This information includes contact information (email and phone number), a description of the life skills classes that the volunteer would like to teach, and any special requirements the volunteer needs to conduct their class (i.e. outdoor space, classroom size, etc).

5.6 Communication Tools

The software will include communication tools for Life Beyond the Books administrators to notify and or remind schools and volunteers of upcoming LBB events through email or notifications within the system.

5.7 Reporting and Analytics

LBB program administrators can generate reports and analyze application data to gain insights into school and volunteer demographics, trends, and outcomes.

5.8 Generate and Analyze Surveys

LBBS application can generate surveys for both students and schools that have participated in the program and also for volunteers that have held life skills classes when requested by the LBB program administrator. The application will also allow the program administrator to transfer survey results into the tool so that metrics and reports can be automatically generated by the application.

5.9 Manage and Track Budgets

The LBBS application allows the LBB program administrator to enter financial information into the program's database so that metrics and reports can be generated

from the information entered. The types of financial information tracked include: monetary donations, grants, in-kind donations of goods or services.

The LBBS application also gives the LBB program administrator the option to generate thank you notes and receipts to donors when requested.

5.10 Database Platform and Interfaces

LBBS should integrate with and be accessible to schools and volunteers thru the existing LBB website which is at the following URL: Life Beyond the Books.

The databases that the scheduling application generates and uses should be accessible to all users / stakeholders thru a common platform that is hosted in a free hosting environment.

5.11 Security and Compliance

The system should prioritize data security and compliance with privacy regulations to protect all stakeholder's sensitive information.

6 System Architecture

6.1 LBBS Architectural Overview

The LBBS follows a **multi-layered** architecture, comprising several key components that communicate with each other to provide a seamless user experience.

Architecture Layers:

1. Presentation Layer (Frontend)

- **Description:** This is the user-facing interface of the system. It allows users to interact with the LBBS, input data, generate and view reports, and display and update the various stakeholders information.
- **Web Application:** A responsive web portal accessible via common browsers.
- **Technologies:** The software development team can choose from a variety of technologies to develop the front end of the application.

2. Business Logic Layer (Backend)

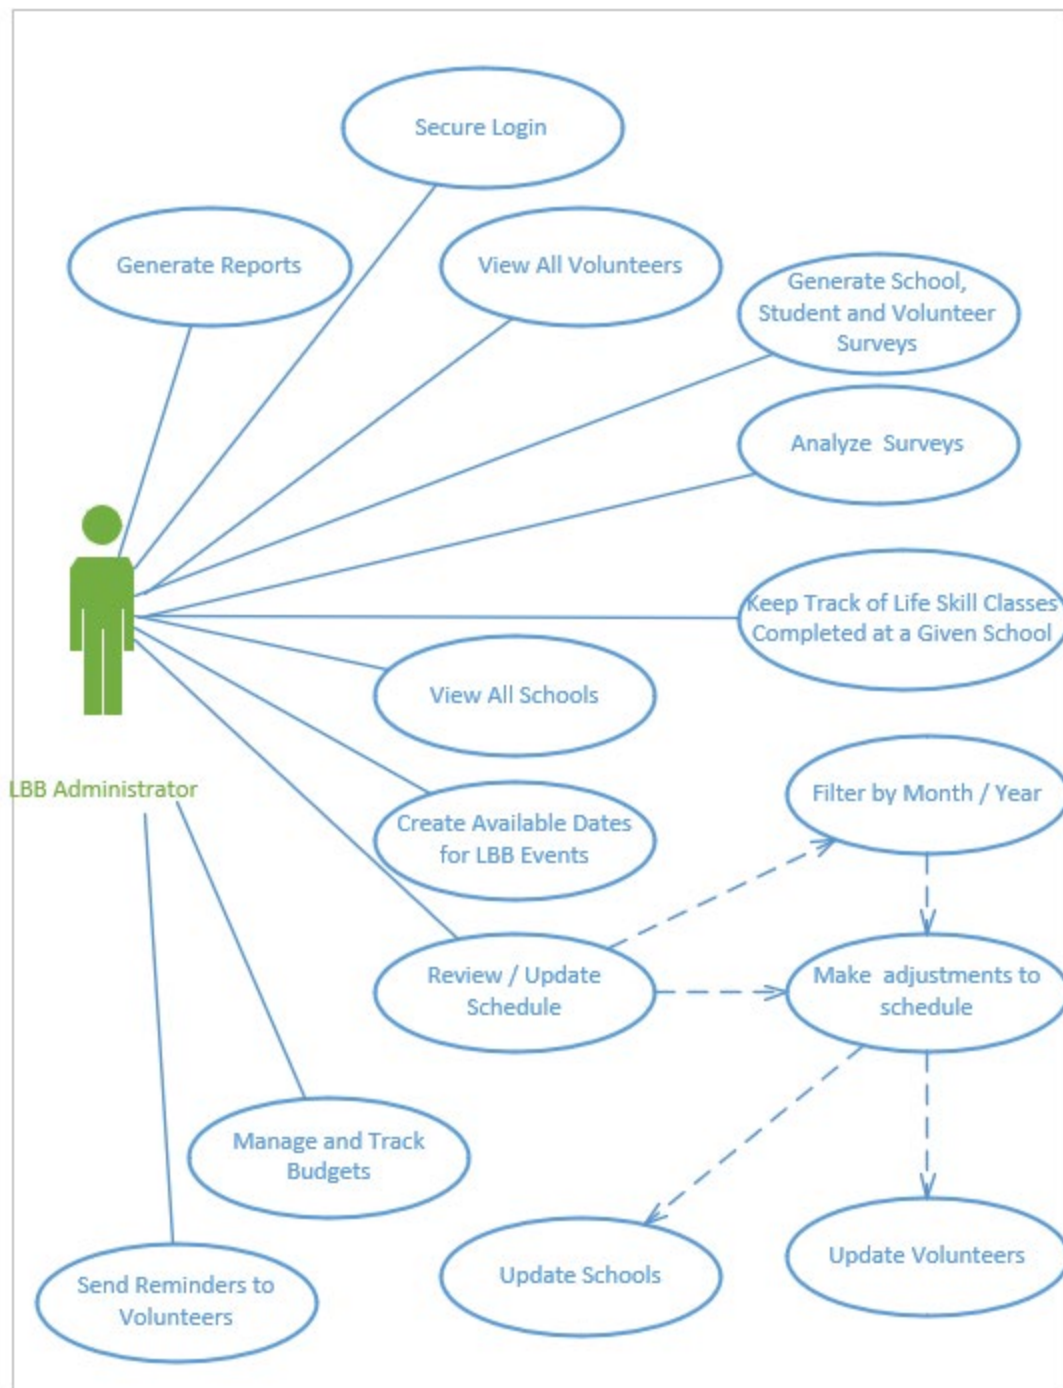

- **Description:** This layer handles the core functionality of the system, processing user input, managing data, and executing business logic.
- **Components:**
 - **Controllers/Services:** Handle the logic for tracking and managing schools, professional volunteers, academic year scheduling, reminders, metrics, etc.
 - **Authentication & Authorization:** Ensures that users can securely log in and manage their accounts.
- **Technologies:** The software development team can choose from a variety of technologies to develop the front end of the application such as Node.js, Python (Django or Flask), Java (Spring Boot), Ruby on Rails, etc.

3. **Data Layer (Database)**

- **Description:** This layer stores all persistent data related to user account information, LBB academic year schedule, and more. It supports querying, updating, deleting any of the elements contained in the database.

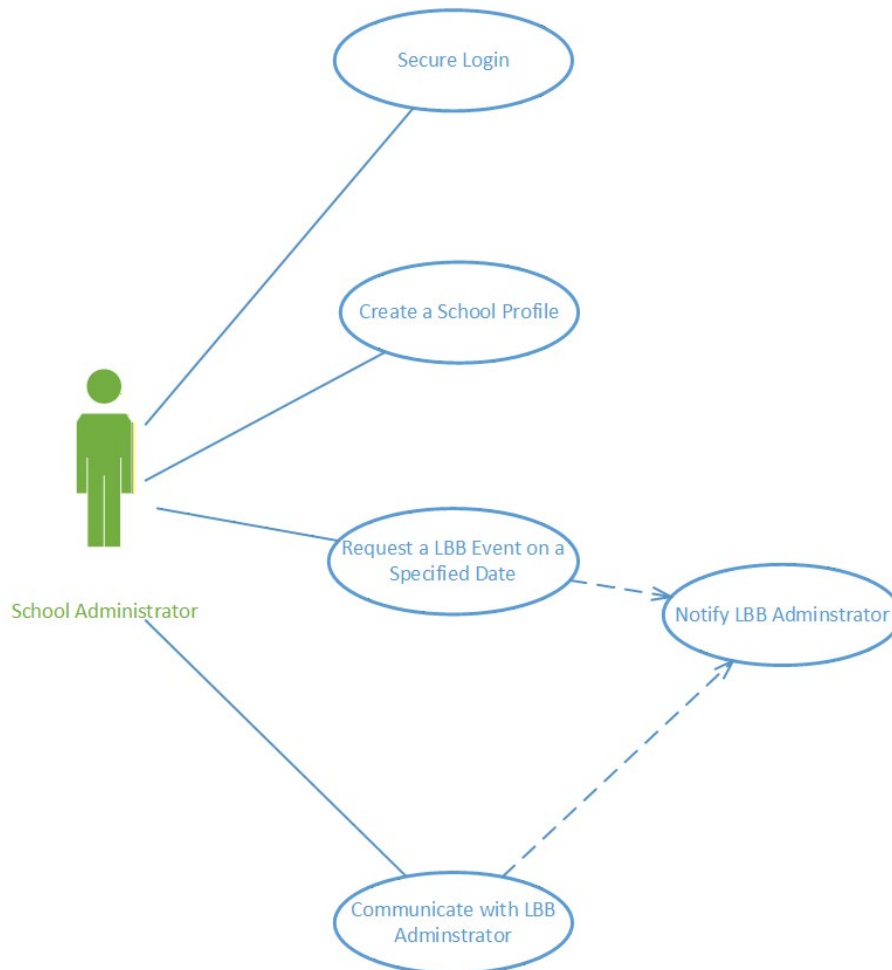

6.2 **LBBS Use Case Diagram - LBB Program Administrator Perspective**

The diagram below represents the use cases of the application from the LBB Program Administrator perspective that we will be implementing as part of this project. There are other use cases for other users of the system in separate diagrams.

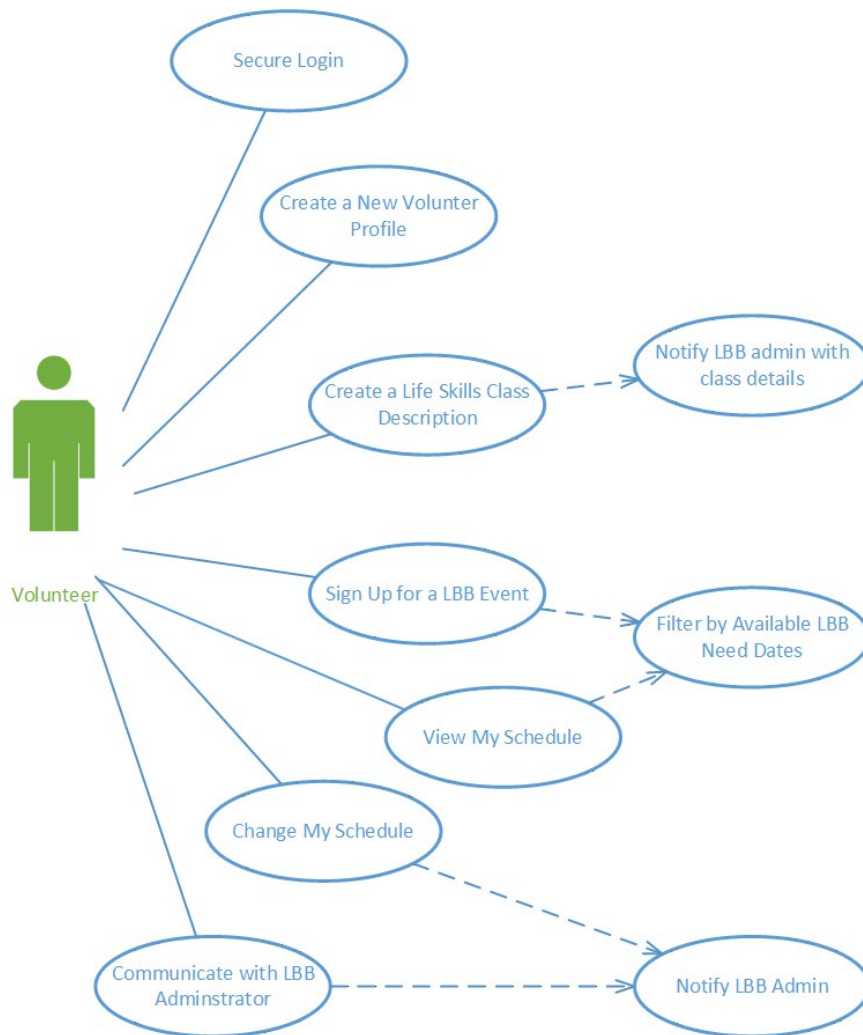

6.3 LBBS Use Case Diagram - School Administrator Perspective

The diagram below represents the use cases from the School Administrator's perspective that we will be implementing as part of this project. There are other use cases for other users of the system in separate diagrams.

6.4 LBBS Use Case Diagram - Professional / Volunteer Perspective

The diagram below represents the use cases from the professional / volunteer's perspective that we will be implementing as part of this project. There are other use cases for other users of the system in separate diagrams.

6.5 Front End Functional Requirements

6.5.1 Request an Account

The Front End subsystem shall allow a user to request a new account by prompting the user for the following information:

- Username
- Password
- Security Question 1 and answer
- Security Question 2 and answer
- First name
- Last name
- Phone number
- Email address
- Type of user: School, Volunteer/professional, or Admin
- If a professional / volunteer, then ask what life skills class they will be teaching.
- School or Professional Affiliation

Note: For security reasons, the LBB program administrator must approve any new account before a new user is allowed to interact with the LBBS application.

6.5.2 Admin User Approval

The Front End shall allow a LBB program administrator to approve one or more pending users who have requested an account.

6.5.3 User Login

The Front End subsystem shall provide a Login capability that requires a registered user to enter their username and password.

6.5.4 LBB Program Administrator User Login

The Front End subsystem shall provide a Login capability that requires a LBB program administrator to enter their username, password and a form of dual authentication.

6.5.5 Update User Information

The Front End shall allow an authorized user to retrieve only their own personal information and update / change any field of the user's information's as requested.

Note: A user shall not have access to any other user's information or the complete listing of schools, classes and volunteers.

6.5.6 Admin Update or Modify User Information

The Front End shall allow the LBB administrator to retrieve a user's personal information and update / change the user type or any field of the user information's as required.

6.5.7 Admin Create Available LBB Event Date

The Front End shall allow the LBB program administrator to create a list of available dates for LBB events to be held at schools for a given academic school year. This list will be available to schools when they register their school for an event or for the volunteers to sign up to offer a life skills class at an event.

6.5.8 Admin Record a Monetary Donation

The Front End shall allow the LBB program administrator to add a monetary or in-kind donation to the LBB program's database and automatically generate a letter of acknowledgement/receipt, including the following information:

- Donor Name
- Donor Email
- Donor Phone Number
- Donor Organization
- Amount of Donation
- Date of Donation
- Kind of Donation (cash or in-kind)
- Send Letter Acknowledging Donation (Y/N)

6.5.9 Create a Life-Skills Class GUI

The Front End subsystem shall provide a GUI for either a volunteer or a LBB program administrator to create or update a life skill class that includes the following information:

- Life Skills Class Name (required)
- Lead Contact for the Class Curriculum (required)
- Other Volunteers Helping with the Class curriculum (optional)

- LBB Class Description (*in free text format*) (required)
- Special Logistics Required (optional)
- Equipment Provided by Professional (optional)
- Any Special Equipment Provided by LBB (optional)
- Max Number of Students (optional)
- Recommended LBB Student Take Home Item (optional)
- Student Take Home Item Volunteer Can Provide (optional)
- Other Special Requirements (*in free text format*) (optional)

6.5.10 Register a School for a LBB Event GUI

The Front End subsystem shall provide a GUI for either a school or a LBB program administrator to enroll a school in a LBB event that includes the following information:

- School Name (required)
- School District (required)
- School Address (required)
- Name of School's Point of Contact (POC) for LBB (required)
- Phone Number of School's POC (required)
- Email Address for School's POC (required)
- School Principal or Vice Principal(s) (Max of 5 entries) (required)
- Requested Date(s) / Time (required)
- Anticipated Number of Students (required)
- List of Any Students With a Photo Restriction (and the name of the class the student will be attending for each school event)
- Other Requests or Comments (*in free text format*) (optional)

6.5.11 View LBB Volunteer Schedule GUI

The Front End subsystem shall provide a professional volunteer with the ability to view and make changes to their own current class schedule that they have volunteered for.

6.5.12 View LBB School Schedule GUI

The Front End subsystem shall provide a GUI for the school administrator to view and make changes to their school's current life skills class schedule, including the following information:

- Date(s) LBB Event(s) to be Held
- For each LBB Event:
 - Any Special Logistical Requirements for a Class
 - Max Number of Students
 - Primary School POC for the LBB event

6.5.13 Generate Volunteer Survey GUI

The Front End subsystem shall allow a LBB program administrator to generate and store responses to an online survey for LBB volunteers that asks the following questions:

- 1) Would you like to participate in the program next year?
- 2) Do you have any colleagues or friends that you can reach out to also participate in the LBB program? If so, can you share their contact information?
- 3) Is the time allotted in the classroom too long or too short?

- 4) Do the take home items that we provide to students enhance your ability to provide a hands-on experience for the students?
- 5) Are you happy with the level of hands-on activities you are able to provide in the class? If not, how can LBB help to increase the hands-on activities?
- 6) Do you have any comments or suggestions for the future of Life Beyond the Books or your experience with the program thus far? How can we improve the execution of the program?

6.5.14 Generate Student Survey GUI

The Front End subsystem shall allow a LBB program administrator to generate and store responses to an offline survey for LBB students that asks the following questions:

- 1) Did you learn a new skill today or in a previous LBB class that you participated in?
 - a) Yes I learned something new that I didn't already know
 - b) No, I already knew it all
- 2) Was the speaker engaging? Did you enjoy the class that you participated in?
 - a) Yes, it was fun! (Let's do it again)
 - b) Meh, at least it gets me out of regular class work
 - c) Boring!!!
- 3) Will you tell your family and friends about this class?
 - a) Yes, I am excited to share what I learned
 - b) Maybe, I might mention something
 - c) Nope
- 4) Which session (or sessions) have you attended today or in the past?
 - a) Back to Basics
 - b) Changing a tire or automotive
 - c) Communications, stress management
 - d) Graphics and presentations
 - e) Safety with police officers
 - f) Pet care with a dog
 - g) Budgeting
 - h) First aid
 - i) Civic duty / Jury duty
 - j) Cooking eggs
 - k) Hand tool usage
- 5) Which session was your favorite?
 - a) Back to Basics
 - b) Changing a tire or automotive
 - c) Communications, stress management
 - d) Graphics and presentations
 - e) Safety with police officers
 - f) Pet care with a dog
 - g) Budgeting
 - h) First aid

- i) Civic duty / Jury duty
 - j) Cooking eggs
 - k) Hand tool usage
- 6) How could we make LBB a better experience for you or other students?
- a) More exciting topics (*do you have any recommendations?*)
 - b) More hands-on opportunities
 - c) Better take-home items
 - d) Make the class longer
 - e) Make the class shorter
 - f) Do it more often
 - g) Just cancel it
 - h) Other

6.5.15 Generate School Survey GUI

The Front End subsystem shall allow a LBB program administrator to generate and store responses to an offline survey for LBB school POCs and staff that asks the following questions:

- 1) Which middle school or site do you work at?
 - a) Coronado K-8
 - b) La Cima Middle School
 - c) Cross Middle School
 - d) Flowing Wells Junior High
 - e) Wilson K-8
 - f) Other
- 2) What is your role at the school? (i.e. administrator, teacher, or support staff)
- 3) Does Life Beyond the Books supplement or fill a gap in the 8th grade programming (Y/N)?
- 4) How could we make Life Beyond the Books better? (Select all that apply)
 - a) More hands on opportunities
 - b) More engaging topics
 - c) Make classes shorter
 - d) Make classes longer
 - e) Modify or remove take-home items
 - f) Offer the program more often
- 5) Do you have any additional comments or suggestions about Life Beyond the Books with respect to the questions asked above or your experience with the program?

6.5.16 Generate Reports GUI

The Front End subsystem shall allow a LBB program administrator to generate any of the following types of reports in either downloadable .csv format and where applicable - visual graphs to more clearly understand the metrics that the application is capable of generating / tracking:

- 1) Current LBB Event Schedule for a Given Academic School Year
- 2) List of Open Class Slots Unfilled Report
- 3) List of all LBB Classes for a Given School / Date Report
- 4) School Demographics Report
- 5) List of All Professional / Volunteers Report
- 6) Report Showing Frequency of Each Type Class Held
 - Including school, date, and number of students participating
- 7) Admin Metric Reports:
 - Total number of classes offered over a given academic school year
 - Total number of volunteers participating in LBB over a given academic school year
 - Total number of schools that have participated in a LBB event over a given academic school year
 - Total number of students that have participated in a LBB event over a given academic school year
 - Total number of take-home items provided to students over a given academic school year
 - Total amount of monetary donations made to LBB in a given academic school year.

6.6 Back End Functional Requirement

6.6.1 Store User Account Information

The Back End subsystem shall store the user's account information (as shown below) to a platform that can be accessed by any user via the current Life Beyond the Books website and on any user on a phone, tablet, or computer running common operating systems:

- Username
- Password
- Security Question 1 and answer
- Security Question 2 and answer
- First name
- Last name
- Phone number
- Email address
- User Type (*School administrator, volunteer, or LBB program administrator*)

6.6.2 Manage User Accounts

The Back End shall update / change stored user information as requested by either a school, volunteer or LBB program admin.

6.6.3 Store School Information

The Back End subsystem shall store a school's registration information (as shown below) that can be accessed by the school administrator or LBB systems administrator via the current Life Beyond the Books website and on any user on a phone, tablet, or computer running common operating systems:

- School Name (required)
- School District (required)
- School Address (required)
- School Point of Contact for LBB (required)
- School POC Phone Number (required)
- School POC Email Address (required)
- School Principal or Vice Principal(s) (Max of 5 entries) (required)
- Requested Date(s) / Time (required)
- Anticipated Number of Students (required)
- Students with a photo restriction
- Other Requests or Comments (*in free text format*) (*optional*)

6.6.4 Retrieve/Update Information for a Given User

The Back End shall allow a user to retrieve all current information in the system for that respective user and update / change the information as requested.

6.6.5 Store Life Skills Class Information

The Back End shall store a life skills class information that includes the following information on a platform that can be accessed by any volunteer via the current Life Beyond the Books website accessible on a phone, tablet, or computer running common operating systems::

- Class LBB Name (required)
- Lead Contact for the Class Curriculum (required)
- Other Volunteers Helping With the Class Curriculum (optional)
- LBB Class Description (*in free text format*) (required)
- Special Logistics Required (optional)
- Equipment Provided by Professional (optional)
- Any Special Equipment Provided by LBB (optional)
- Max Number of Students (optional)
- Recommended LBB Student Take-home Item (optional)
- Student Take-home Item Volunteer Can Provide (optional)
- Other Special Requirements (*in free text format*) (*optional*)

6.6.6 Store Financial Donation Information

The Back End shall store information related to any monetary or in-kind donation that includes the following information on a platform that can be accessed by any volunteer via the current Life Beyond the Books website accessible on a phone, tablet, or computer running common operating systems:

- Donor Name
- Donor Email
- Donor Phone Number
- Donor Organization
- Amount of Donation
- Date of Donation
- Kind of Donation (cash or in-kind)

- Letter Acknowledging Donation Sent (Y/N)

6.6.7 Retrieve / Manage the LBB Event Schedule

The Back End shall allow a LBB program administrator to retrieve and update any fields in a current academic year schedule.

6.6.8 Retrieve School or Volunteer Registration Information

The Back End shall allow a LBB program administrator to retrieve all current information for schools or a volunteer that are registered for a LBB event in a given academic year.

6.6.9 Filter Schools and Volunteers

The Back End subsystem shall allow a LBB program administrator to retrieve and filter information based on any field for all schools or volunteers and make this information available to the Front End.

6.6.10 Store Volunteer Survey Information

The Back End subsystem shall allow a LBB program administrator to store and retrieve responses to an online survey for LBB volunteers.

6.6.11 Store Student Survey Information

The Back End subsystem shall allow a LBB program administrator to store and retrieve responses to an offline survey for LBB students.

6.6.12 Retrieve Report Information

The Back End subsystem shall allow a LBB program administrator to retrieve, filter and send data to Front End to display appropriate information for each individual report that the system supports, as listed below.

- LBB event academic year schedule for a given academic school year
- List of LBB events with unfilled LBB class slots
- List of all LBB class scheduled for a given school / date
- School demographics that shows dates of the LBB events at that school, number of classes held at the school, total number of participants, total number of volunteers
- List of all active LBB volunteers
- List of all inactive LBB volunteers
- Report that shows the frequency of each type of class held showing the following information:
 - School name, date, number of students participating in the LBB class

6.6.13 Retrieve Metric Information

The Back End subsystem shall allow a LBB program administrator to retrieve, filter and send data to Front End to display appropriate graphical metric information for each individual metric report that the system supports, as listed below.

- Total number of classes offered over a given academic year
- Total number of volunteers participating in LBB over a given academic year
- Total number of schools that have participated in a LBB event over a given academic year

- Total number of students that have participated in a LBB event over a given academic year
- Total number of take-home items provided to students over a given academic year
- Total amount of monetary donations made to LBB in a given academic year.

6.7 Scheduling Engine Functional Requirements

6.7.1 Reserve a LBB Event for a School

The Scheduling Engine subsystem shall determine if a given date has already been assigned to another school and if not, will allow the school to register for a LBB event on the requested date (only 1 school can be assigned to a given LBB event at a time).

6.7.2 Admin Manual Schedule Overrides

The Scheduling Engine subsystem shall allow LBB program administrator to manually make adjustments to the academic year schedule for either a school or a volunteer. If a school or volunteers have signed up for the given event, an email should be generated informing the affected parties of the changes made to the schedule.

6.7.3 Send Volunteer Registration Confirmation

After accepting a volunteer request to register for a given LBB event, the Scheduling Engine subsystem shall automatically send an email containing logistics information to the volunteer confirming their registration in the LBB event.

6.7.4 Send School Registration Confirmation

After accepting a school's request to register for a given LBB event, the Scheduling Engine subsystem shall automatically send an email confirming their registration in the LBB event on the requested date to the school.

6.7.5 Retrieve Schedule Information

The Scheduling Engine subsystem shall return the current compiled schedule for any given (or all) schools or volunteers for each of LBB events upon LBB program administrator request.

6.7.6 Send Reminder of Upcoming Event

The Scheduling Engine subsystem shall automatically send an email reminder containing logistics information to all volunteers that are signed up for an upcoming LBB event within 14 days, and a reminder 4 days before the event.

6.8 Non-Functional Requirements

6.8.1 Integration

The LBBS application shall interface with the existing Life Beyond the Books website and be accessible on multiple platforms including computers, tablets, and cell phones running Windows, Apple or other common Operating Systems. The application must be accessible from multiple browsers.

The database(s) that the application uses must be accessible to the LBB program administrators for their internal usage.

6.8.2 Scalability

The system shall be scalable to accommodate an increasing number of schools and volunteers as the program grows. This may include extended features to enhance user registration, scheduling, notifications, reporting, and data security.

6.8.3 Security and Compliance

The LBBS provides a secure portal to protect both school and volunteer sensitive information.

6.8.3.1 Data Privacy Protections

The system shall have robust security features to protect sensitive applicant information and ensure compliance with data privacy regulations, (including FERPA, donor financial information, etc.).

6.8.3.2 Username and Password

The system shall require that all users have a valid username and password in order to access the UASAMS.

6.8.3.3 Account Creation

If a user does not have an authorized account on the UASAMS, the system shall prompt the user to create an account by entering a username and password which must be approved by a system administrator prior to having the account enabled.

6.8.3.4 Unauthorized Users

The system shall prevent un-authorized users from gaining access to the system.

6.8.3.5 Granted Permissions

The system shall allow authorized users to only have access to portions of the system that they are granted permissions for.

6.8.4 User Support

The application software system will offer user support and assistance to school administrators, volunteers, and LBB program administrators to ensure seamless registration and scheduling.

7 Change Requests
